The KAP 140 dual axis autopilot can control pitch and roll. The pilot must always control power and yaw.

There are two rows of information shown on the autopilot display. The top row shows which modes you are currently in.

KAP 140 Dual Axis Autopilot Quick Reference Card

The KAP 140 started in most R models as a single axis autopilot, having only heading control. It still utilized NAV mode and APCH mode, coupling to CDI number 1. Like all KAP 140s, when the autopilot was first activated, it started in ROL mode, basically acting as a wing leveler (sidenote: have any pilots actually ever utilized ROL mode?).
