Camera lenses estimates: Volume 5 (Photography and society ...

Their focal lengths fall somewhere in the middle, usually between 35mm and 85mm. A zoom lens within this range will have a small enough focal length at the bottom end to take a wider angle, full-frame photo, and a large enough focal length at the top end to zoom in on subjects. 5. Specialty Lenses.

Photography 101: Understanding Camera Lenses Basics - 2020 ...

The focal length of macro lenses usually varies between 35mm and 200mm. However, many prefer telephoto lengths as being far from the subject makes it easier to illuminate the scene. Regardless of the distance the photographer is from their subject, macro lenses do not perform well in far distances.

Refurbished and Used Camera Lenses | Harrison Cameras
A finely crafted lens, the Panasonic 100-400mm is relatively large for a Micro Four Thirds format zoom and weighs almost a kilogram. With its MFT mount, it will work on Olympus mirrorless cameras, as well as compatible Panasonic Lumix models. It's pretty much the same weight as the Sigma and Tamron 100-400mm lenses for full-frame cameras.

If your specialty is city/architecture photography, then we recommend the Tamron SP 15-30mm f/2.8 Di VC USD lens. This high-speed ultra-wide zoom lens for Canon and Nikon DSLRs works well for landscapes, cityscapes, and interiors. It also minimizes common issues with ultra-wide lenses, like distortion, chromatic aberrations, and blur.

The XF10-24mmF4 R OIS WR is an ultra-wide zoom lens covering focal lengths from 10mm to 24mm (equivalent to 15mm-36mm in the 35mm format) that utilises the same optical design from the original XF10-24mm OIS lens to provide similar image-resolving performance. Read full article

Hirecamera | UK camera, lens & accessory hire & rental

When it comes to lenses, on a full frame camera, a 50mm lens roughly reproduces the angle of view that we have with our eyes. That means that a lens that's shorter than 50mm will produce images with a wider view and images that are longer than 50mm will have a narrower view.

Camera Lens Terms Explained for Beginner Photographers

Quality lenses allow you to diversify your photography and take better pictures. From fish-eye to telephoto, camera lenses have been developed for every possible type of photography. Get up close with macro, photograph dramatic landscapes with wide-angle, capture the action with zoom, and long range objects with telephoto.

4) WIDE ANGLE LENS. What it is: We normally categorize lenses within the focal length range of 16-35mm as "wide-angle lenses". As the name implies, wide-angle lenses are capable of capturing a vast area. Common usage: Street, landscape, and environmental portrait photography.. Advantages: Captures a wide-angle of view. Good for landscape, tall buildings, and selfies.
