This book expands the scope of risk management beyond insurance and finance to include accounting risk, terrorism, and other issues that can threaten an organization. It approaches risk management from five perspectives: in addition to the core perspective of financial risk management, it addresses perspectives of accounting, supply chains, information systems, and disaster management. It also covers balanced scorecards, multiple criteria analysis, simulation, data envelopment analysis, and financial risk measures that help assess risk, thereby enabling a well-informed managerial decision making. The book concludes by looking at four case studies, which cover a wide range of topics. These include such practical issues as the development and implementation of a sound risk management structure; supply

chain risk and enterprise resource planning systems in information systems, and disaster management.

A reference text focusing on basic organic chemistry and reactions of naturally occurring organic substances in soils. Covers pools of organic matter in soils, transformations, methods of extraction and fractionation. Section two deals primarily with the chemistry of known classes of organic compounds in soils including saccharides, lipids and constituents containing nitrogen, phosphorus and sulfur. Section three is concerned with basic organic chemistry of humic substances, followed by the importance of organic matter associations and interactions. Contains new chapters on NMR spectroscopy, analytical pyrolysis and on chemical structures.

This book is the first work that comprehensively presents the accounts of Lia Eden, a former flower arranger who claims to have received divine messages from the Archangel Gabriel and founded the divine Eden Kingdom in her house in Jakarta. This book places Lia Eden's prophetic trajectory in the context of diverse Indonesian spiritual and religious traditions, by which hundreds of others also claimed to have been commanded by God to lead people and to establish religious groups. This book offers a fresh approach towards the rich Indonesian religious and spiritual traditions with particular attention to the accounts of the emergence of indigenous prophets who founded some popular religions. It presents the history of prophetic tradition which remains alive in Indonesian society from the colonial to reform period. It also explores the ways in which these prophets rebelled against two hegemonies: colonial power in the past and Islamic orthodoxy in the present. The discussion of this book focuses on Lia Eden including her biography, claims to prophethood and divinity, the development of her group Eden Kingdom, her challenge to Islamic orthodoxy under the banner of the MUI (Indonesian Ulama Council), her persecution by radical groups, her experiences in court trials and imprisonment, and public responses to her emergence. The discussion also covers other themes currently drawing public attention in Indonesia, such as pluralism, religious freedom, tolerance, discrimination against minorities, and secularisation.

By bringing together elements of a radical new approach to the firm based on a biological metaphor of the ecosystem, this unique book extends the limits of existing theories traditionally used to investigate business networks.

Mondiale waardeketens zijn het complexe netwerk van activiteiten tussen lokale producent en eindgebruiker. "Global value chains" schetst de invloed van deze waardeketens op lokaal, nationaal en internationaal niveau. Het boek geeft eerst een theoretisch en wetenschappelijk kader. Vervolgens krijgt de lezer een compleet beeld van de betekenis van mondiale waardeketens aan de hand van diverse casestudies, zoals de bierbrouwindustrie in Ghana, de Namibische bio-industrie, de industrie van halfgeleiders in China en Maleisië en het toerisme in Tanzania.

Conservation genetics focuses on understanding the role of genetic variation for population persistence. This book is about the methods used to study genetic variation in endangered species and whether genetic variation matters in the extinction of species.

What rational justification is there for conceiving of all living things as possessing inherent worth? In *Respect for Nature*, Paul Taylor draws on biology, moral philosophy, and environmental science to defend a biocentric environmental ethic in which all life has value. Without making claims for the moral rights of plants and animals, he offers a reasoned alternative to the prevailing anthropocentric view--that the natural environment and its wildlife are valued only as objects for human use or enjoyment. *Respect for Nature* provides both a full account of the biological conditions for life--human or otherwise--and a comprehensive view of the complex relationship between human beings and the whole of nature. This classic book remains a valuable resource for philosophers, biologists, and environmentalists alike--along with all those who care about the future of life on Earth. A new foreword by Dale Jamieson looks at how the original 1986 edition of *Respect for Nature* has shaped the study of environmental ethics, and shows why the work remains relevant to debates today.

The information revolution has made for a radically more fluid knowledge environment, and the growth of venture capital has created inexorable pressure towards fast commercialisation of existing technologies. Companies that don't use the technologies they develop are likely to lose them. Key features Over the past several years, Hank Chesbrough has done excellent research and writing on the commercialisation of technology and the changing role and context for R&D. This book represents a powerful synthesis of that work in the form of a new paradigm for managing corporate research and bringing new technologies to market. Chesbrough impressively articulates his ideas and how they connect to each other, weaving several disparate areas of work R&D, corporate venturing, spinoffs, licensing and intellectual property into a single coherent framework.
